Feature f-1

Information for Authors

Developmental Biology will publish papers containing new and significant information bearing on developmental mechanisms of general interest. Analysis of development, growth, regeneration, and tissue repair in plants and animals at the molecular, cellular, and genetic levels are topics suitable for the journal. In all areas, analytic rather than descriptive studies will be favored.

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the Editor, the Publisher, or the Society for Developmental Biology.

Publication of a research article in *Developmental Biology* is taken to imply that the authors are prepared to distribute freely to interested academic researchers for their own use any clone (of cells or DNA or antibodies) used in the experiments reported. Manuscripts that report research involving human subjects must be supported by a copy of the document authorizing the proposed research, issued and signed by the appropriate official(s) of the institution where the work was conducted.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 1500 words or less, including the bibliography, and should have an abstract of less than 100 words and a limit of one page of figures. All papers will be published in English.

Review and memorial articles are published after specific invitations from the editorial board; they are subject to the same review process as regular articles, but receive priority for publication. These articles are limited to 3000 words.

Manuscripts should be as concise as possible; full documentation of results should be combined with maximum brevity and clarity. Quantitative data should be presented so that the reader can readily judge statistical significance of differences. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results, and discussion. Combined results and discussion may be used. Acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. Number all manuscript pages consecutively and type double-spaced throughout. Provide a running title of 35 or fewer letters and spaces. Use footnotes sparingly; cite them with superscript numbers; type them on a separate sheet. Do not italicize for emphasis.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (USA)*, the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Système International. Use prefixes, e.g., μM, not 10^{-6} *M*. Note that *M* stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the orientation and with the authors' names. *Line drawings* will be reduced in accordance with the complexity of the figures. Good quality prints are acceptable. The maximum size submitted should be 215 × 280 mm. *Photographs* should be submitted as actual size for reproduction, fitting column (90 mm) or page (185 mm) width. Sets of micrographs mounted on light cardboard and in combinations up to 203 × 267 mm in size are acceptable. For best reproduction, provide clear, glossy prints with adequate contrast. The magnification should be indicated by a bar on the photograph. Figures that are to appear together as one plate should have comparable contrast and density and should be mounted on cardboard or paper as close together as possible. Do not combine line drawings and halftones into composite plates; if you wish them to appear together, submit unmounted original art and a layout sheet. The printer will place thin white lines between the figures on each plate. Providing an overlay that indicates the most critical areas of the micrograph will aid in ensuring high-quality reproduction.

Suggestions for *cover photographs* are welcome. Submit them as $8\frac{1}{2} \times 11$-inch color or black-and-white prints to accompany specific articles. A short (one-line) legend should accompany each photograph. *Illustrations in color* can be accepted only if the authors defray the cost; however, authors may apply to the Editor for financial assistance for this purpose.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals; each should have a concise heading.

References to the literature should be cited as: Doe (1987) has observed that . . . ; (Doe, 1988). Doe *et al.* (1988) should be used in the case of articles with more than two authors. Use suffixes a, b, etc., following the date to distinguish two or more works by the same authors in the same year (Doe, 1987a,b). Arrange literature citations in the bibliography according to the surname of the author, using the following styles:

> COLIN, A. M. (1986). Rapid repetitive microinjection. *In* "Methods in Cell Biology" (T. E. Schroeder, Ed.), Vol. 27, pp. 395–406. Academic Press, San Diego, CA.
>
> HOLLEY, J. A., and SILVER, J. (1987). Growth pattern of pioneering chick spinal cord axons. *Dev. Biol.* **123,** 375–388.

Abbreviate journal titles according to *Chemical Abstracts Service Source Index*, 1985. Do not refer to abstracts or papers which have not been accepted for publication.

Proofs and Reprints. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

To submit a manuscript, send two complete copies including illustrations to Peter J. Bryant, Editor-in-Chief, *Developmental Biology*, Developmental Biology Center, University of California, Irvine, California 92717. Telephone (714) 856-4715; E-mail address: PJBRYANT@UCI; Fax number: (714) 856-7399. In the cover letter to the Editor or on the manuscript title page, indicate the name, address, and telephone number of the author who should be contacted in editorial matters.

For information about advertising in *Developmental Biology*, please contact Calvin Caldwell, Advertising Coordinator, Journal Promotion Department, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101 (telephone: (619) 230-1840).

The INTERDISCIPLINARY
MOLECULAR AND CELLULAR BIOLOGY PROGRAM (IMCBP)
at the UNIVERSITY OF WASHINGTON

invites application to the multidepartmental program in Molecular and Cellular Biology, leading to the Ph.D. degree in the sponsoring departments in the **School of Medicine:** Biochemistry, Bioengineering, Biological Structure, Immunology, Microbiology, Pathology, Pharmacology and Physiology-Biophysics and in the **College of Arts and Sciences:** Botany, Genetics and Zoology. Faculty members participating in the IMCBP are located on the University of Washington campus and at the Fred Hutchinson Cancer Research Center.

The University of Washington is a leader in developing technologies used in molecular and cellular biology and in applying these to advance the understanding of basic biological processes. Faculty research interests encompass both prokaryotic and eukaryotic (animal and plant) cells in such research areas as:

Cell Membranes/Ion Channels and Membrane Transport/Cell Receptors; Cell Division/Cell Proliferation/Cell Cycle; Cell Differentiation; Intracellular Organelles; Cytoskeleton/Biomechanics; Cell Transformation/Tumor Biology/Oncogenes/Oncogenesis; Molecular Genetics/Regulation of Gene; Expression/Growth Factors/Hormones; DNA Replication/Mutagenesis/Repair and Recombination; Chromosome Structure and Function; Gene Structure and Gene Families; Viruses/Retroviruses; Molecular Structure (MRI/X-ray Crystallography)/Protein Structure

For more information about the **IMCBP** graduate study or the **IMCBP Undergraduate Summer Research Internships Program** at the University of Washington, send inquiries to: Dr. Karen Holbrook, Director, **IMCBP**, School of Medicine SC-64, University of Washington, Seattle, WA 98195.

Graduate Program Applications due February 1, 1989

Undergraduate 1989 Summer Program Applications due March 1, 1989

New and Important References

CELL CULTURE
Volume 58

edited by
William B. Jakoby and Ira H. Pastan

Cell Culture, Volume 58 of **Methods in Enzymology**, is now available in an unabridged, spiralbound version specifically designed to meet the needs of the biochemically oriented biologist. It serves both as an instructional source for the novice and as a reference for more specialized methods.

Spiralbound Reprint: $45.00
ISBN: 0-12-181776-8, 1988, 642 pages

Two new volumes of...
METHODS IN CELL BIOLOGY
Volumes 29 and 30

edited by
D. Lansing Taylor and Yu-Li Wang

Prepared under the Auspices of the American Society for Cell Biology

These two volumes are sourcebooks of methods for living cells. Volume 29 gives comprehensive coverage of methodology: fluorescent analogs, procedures for fluorescent labeling of various cellular structures, and fluorescence microscopy. Volume 30 describes instrumentation and quantitation for imaging and spectroscopy.

Volume 29
Fluorescence Microscopy of Living Cells in Culture, Part A

Fluorescent Analogs, Labeling Cells, and Basic Microscopy

December 1988, 331 pages, $59.00
ISBN: 0-12-564129-X

Volume 30
Fluorescence Microscopy of Living Cells in Culture, Part B

Quantitative Fluorescence Microscopy—Imaging and Spectroscopy

February 1989, c. 478 pages
$89.00 (tentative)/ISBN: 0-12-564130-3

THE *CHLAMYDOMONAS* SOURCEBOOK
A Comprehensive Guide to Biology and Laboratory Use

Elizabeth H. Harris

This book reviews both past and current research using *Chlamydomonas* in all the major fields in which it has been important as a model system. In addition to summarizing the published literature, the author has included a significant quantity of previously unpublished data and genetic analysis. All research workers who use *Chlamydomonas* as a model experimental system will find that this volume belongs on the lab bench.

February 1989, c. 802 pages, $145.00
ISBN: 0-12-326880-X

Forthcoming...
THE BIOLOGY OF EUGLENA
Volume 4
Subcellular Biochemistry and Molecular Biology

edited by
Dennis E. Buetow

CONTENTS: *S. Kitaoka, Y. Nakano, K. Miyatake, and A. Yokota*, Enzymes and Their Functional Locations. *O. Bertaux, R. Valencia, and R. Magnaval*, The Nucleus. *D.E. Buetow*, The Mitochondrion. *M.J. Merrett*, Microbodies, Lysosomes, and Autophagic Vacuoles. *M. Edelman and Z.E. Kahana*, Chloroplast Protein Synthesis. *R.B. Hallick and D.E. Buetow*, Chloroplast DNA. *N.G. Avadhani and G. Freyssinet*, Polyribosomes, Ribosomes, and Ribosomal RNA. *J. Delehanty, W.G. Farmerie, and W.E. Barnett*, Transfer RNA. *V.M. Nigon and G. Verdier*, Poly (A)-Containing-RNA and Messenger RNA. Index.

March 1989, c. 556 pages
$127.50 (tentative)/ISBN: 0-12-139904-4

Development, Growth & Differentiation

Distributed by Academic Press

Editor-in-Chief: **Kiyotaka Yamana**
Kyushu University, Fukuoka, Japan

Devoted to the Publication of Original Research Concerning Developmental Phenomena

All types of organisms, including plants and microorganisms, are within the scope of ***Development, Growth & Differentiation.*** Articles focus on the biochemical, biophysical, and analytically morphological levels of development. Reports on techniques and reviews on selected subjects are also published.

Research Areas Include

- Cell division
- Cellular kinetics
- Developmental genetics
- Dormancy
- Fertilization
- Germination
- Growth
- Metamorphosis
- Morphogenesis
- Pathogenesis
- Regeneration

Published by the Japanese Society of Developmental Biologists
